Storgrid Android client

Getting started

Storgrid is a Cloud-based Drive on your computer that works as easily as all the consumer online storage services you're familiar with. You are using your own private cloud storage environment instead of a public one. Storgrid provides access to your content anywhere, anytime, to anyone of your choice via any (mobile) internet device. Just 'dropping' the files in your Storgrid Drive and share it. Sharing is a very simple process and collaboration with other co-workers is transparent. Storgrid is easy to use, no learning curve and 'dropping' and 'sharing' all take place via secure connections (https). By using the Storgrid on your computer you will enjoy all the benefits of cloud storage.

Your user credentials

There are two ways to setup the Storgrid server, with or without an Active Directory connection. When using an Active Directory connection (LDAP), please use the user credentials of your Windows Active Directory environment. When using the Storgrid local authentication, you should receive a “new user email” to setup your password. Ask your administrator what you should use.

Working with the Android client

The Storgrid Android client makes a direct https/WebDAV2 connection to the Storgrid server. The files appear in your Storgrid application are the files on the server, unless you switch on the offline folder functionality. Using Storgrid you can easily share, manage file versions or just view your files. Using the “open with function” you can use any file type when you have installed a program to support the file type.

Storgrid Android client

Installing the Storgrid Android client

Go to the “App Store” on your Android device, search for “Storgrid EFS” and install the Storgrid Android client.

Setup your connection

Startup the Storgrid Android client for the first time and accept the terms and conditions. The new connection setup screen will appear.

Fill-in

- Account label:** Choose any name.
Domain: The FQDN-name, where your Storgrid server is listening to, inform at your administrator what you should use, example: storgrid.mycompany.com.
Login: Your username.
Password: Your password.

Open file= Downloads the file and asks with program to open with.

Toggle synchronization= The offline file, when switching on the file will be synced to the local storage for offline use.

Cut= cuts the file.

Copy= Copies the file.

Delete= Deletes the file

Properties= Shows the properties of the file and your access to file versions if any exists.

Storgrid Android client

Share a file or folder

Select & hold the file or folder you want to share, choose share.

Share name: The name of the share

Share duration: A time stamp how long the share must be available with a start and end date.

Add internal: Invite other Storgrid users or groups to collaborate, press “Add Internal” and type in the name or select the user or group from your contact list and press “ok”.

Add external: Invite external email users to collaborate, press “Add External” and type in the email address or select the email address from your contact list and press “ok”. The external user can access through an email link sent by the Storgrid server. When the email user wants to “write/save” in the Storgrid environment they must register.

Email Note: Fill-in any note to inform your shared users.

Protect with password: For extra security, you can set a password on the email access link sent by the Storgrid server. The given password is NOT sent by the email notification the email user receives.

One time access: The email access link can only be used one time.

Show participants from higher level: Show the shares that have been made on a higher level.

Unshare a file or folder

To unshare a file/folder, go to the share screen of your shared content. Delete any recipients, with the select & hold function, and press the save button (📁).

Storgrid Android client

Sharing rights

There are four rights to set for your shared content, by default Storgrid sets the download rights for newly added recipients:

- 1- **Owner rights:** Write access with the option to manage the share.
External collaborators / (email) users are not allowed to share, the “owner rights” are not showed.
 - 2- **Download/Upload rights:** Write access to the shared content.
 - 3- **Download rights:** Collaborators can download the content.
 - 4- **View only rights:** The file will be rendered if it's a MS Office documents to show it in the web browser.
- Supported files: Word, Excel, Powerpoint.

Share indicators

Folder is not shared

A person or group have shared a folder with you

I shared a folder to a person or group

In this folder a file or subfolder is shared

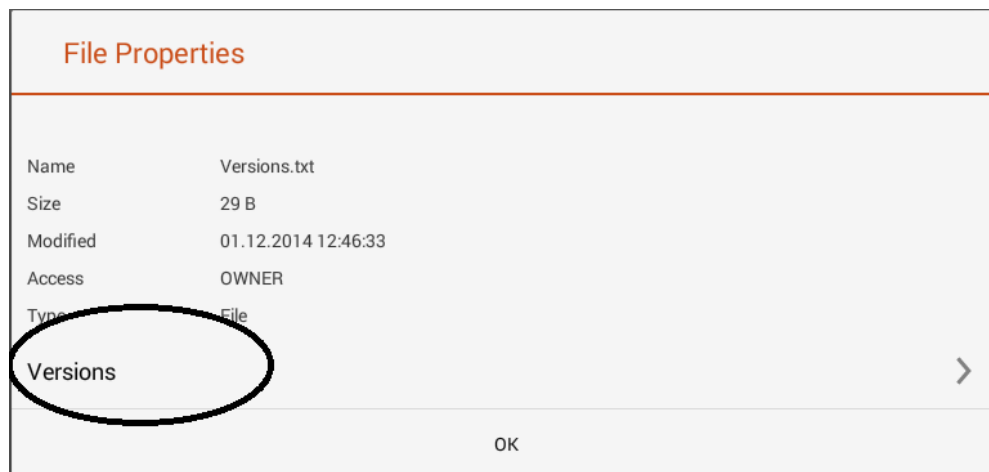

Storgrid Android client

File versions

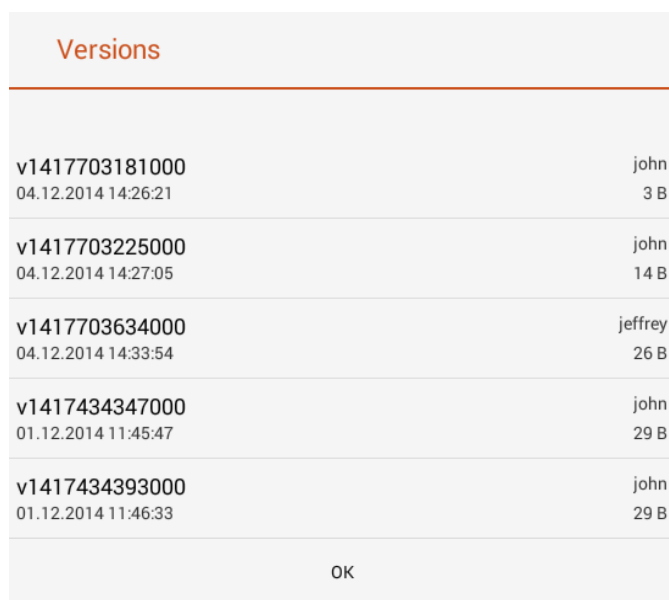

Every time a file is saved, a version is saved by the Storgrid server.

The latest saved file is shown in the Storgrid environment.

To restore a previous version: select & hold the file and choose properties, click on “versions”.

Select the file you want to restore and click “OK”.

Note: when restoring a file, a new copy is saved, a new version is created also.
